

## Easy and secure file sharing in your own cloud.

The secure alternative to solutions like Dropbox: Benefit from smooth cooperation with colleagues and customers – hosted entirely in German data centres.

### TEAMWORK MADE EASY

OwnCloud is your own personal cloud storage facility that allows you to reliably and noticeably simplify internal and external cooperation. You no longer have to deal with the cumbersome task sending large files by e-mail; you can simply upload files and share them with others without any fuss. This way, the data connections are always encrypted with secure certificates.

### SECURE ACCESS FROM ANY LOCATION

You can install OwnCloud software on your own computer, which lets you access files in offline mode and offers automatic background synchronisation; or you can use the web interface. Either way, fast access to your data is guaranteed. And you can work with OwnCloud using more than just your PC and laptop: There's an app version available for download that lets you access your data with a tablet or smartphone when you're on the road.

### YOU MAKE THE RULES

You can provide rules for easy sharing of folders and files with customers and other external users:

Specify a time limit for access, or provide a password for additional protection.

### AUTOMATIC VERSIONING

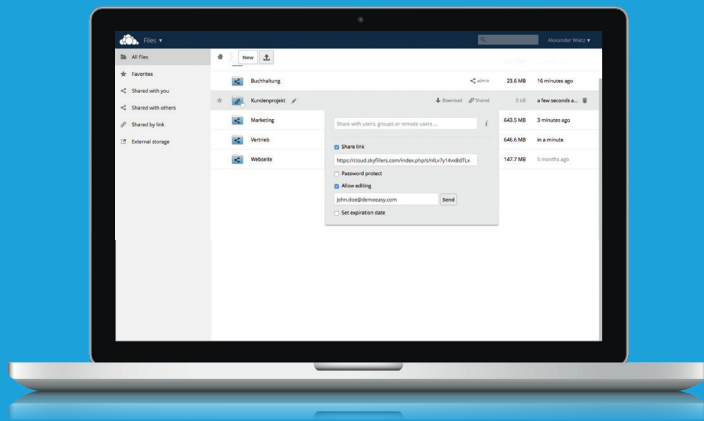

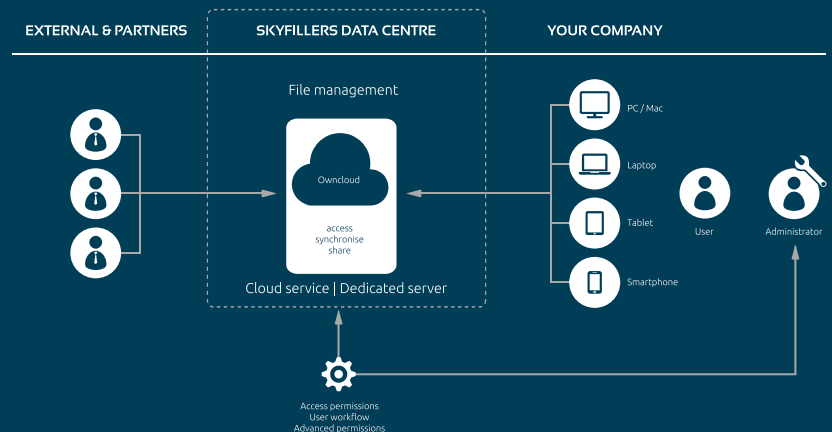

Data is synchronised automatically to ensure that every device runs the latest version. Every change to a document is recorded and stored in the process. But you can access more than just current data; the software also allows you to access older versions of a document or review the changes in a report at any time.

#### Our cloud benefits at a glance

- + Requires no additional hardware or software
- + Easy user administration via a web-based administration interface
- + Secure access from any location
- + Automatic synchronisation/versioning
- + Specification of individual rules (time limits, password)
- + Hosted entirely in German data centres

## How the OwnCloud service works

Your data is stored securely at the Skyfillers data centre. Users can access your data securely from anywhere. OwnCloud is also perfectly integrated into all standard devices and synchronisation takes place fully automatically.

## Access for third-parties and partners

OwnCloud makes it easy for you to share files and folders with third-parties. All you have to do is simply upload the files you want to share via a special link. You can also automatically disable access after a specific period of time.

## OwnCloud Features

Desktop clients for PC and Mac

Also runs on smartphones and tablets (iOS 7 or higher, Android 2.2 or higher)

Web access as an alternative to the client

Company headquarters and data storage in Germany

Offline work using the client

Fast and easy file sharing

Make files available externally

Limit access to a specific time period or assign a password

Automatic versioning

## Benefits

OwnCloud runs on all popular operating systems, for example Windows 7 or higher, Mac OS X 10.7 or higher, CentOS 6.5 & 7, Ubuntu 12.04 LTS & 14, Fedora 21 & 21, openSUSE 13.

You can also access your data on the go at any time.

Access from any location using an up-to-date Internet browser.

Absolute legal certainty for companies. Contract under German law.

You can access the data even without the Internet.

Teamwork made easy.

Large files no longer have to be sent via e-mail.

Access control is highly flexible.

Easy to revert to previous versions.
