

## REMOTE BACKUP

Always on the safe side thanks  
to intelligent data backup.

Fully automatic data backup and optimum protection from data loss:  
Back up files and folders, virtual machines and entire servers  
in German data centres.

### FULLY AUTOMATED BACKUP – FOR YOUR PROTECTION

Losing company data often also results in a loss in revenue. It makes no difference whether the data is lost as a result of an accident, damaged hardware or if it is unintentionally overwritten. Ensuring protection here is very simple. Once your data backup package has been set up, all of your files are backed up fully automatically.

### SECURE TRANSFER & STORAGE

The remote backup function encrypts your data before transferring it to our data centres and storing it there for you. The data is encrypted in line with the latest standards and is stored with multiple redundancy. What's more, you can specify the key yourself.

### OPTIMUM USAGE OF BAND- WIDTH

After an initial full backup, the intelligent transfer feature ensures that only the changes made since the last backup are transferred. When dealing with particularly large files, the feature even ensures

that only modified fragments of the data are transferred. Our remote backup function maintains an overview and makes it very easy to recover any data or versions you might want restored.

### EASY ADMINISTRATION

The software is fast and easy to install and simple to operate on any device that needs to be backed up. Simply select the files and folders that need to be backed up and backup begins in the background. You can also specify the retention time and backup frequency as required.

#### Our cloud benefits at a glance

- + Data backed up on redundant storage solutions in a secured data centre
- + No need for your own hardware; no maintenance effort
- + Easy to set up and operate
- + Requires no large investments in tape drives, NAS systems or licenses
- + Retention times can be freely specified

### How Remote Backup works

Remote Backup can back up your data directly from servers and workstations and maintain your in-house backup as a second instance in the cloud.

### Easy recovery

You can restore your backup at any time with our Skyfillers backup software. In doing so, you get to select precisely which backup and which data you would like to restore.

### Remote Backup Features

- 256-bit SSL encryption
- 256-bit AES encryption with your own key
- Incremental backups and in-file delta
- Supported clients: Windows, Windows Server, Mac, Linux
- Multiple backup schedules
- Short backup times
- Easy data recovery
- Hosted in a highly secure German data centre

### Benefits

- Secure data transfer is ensured at all times thanks to encryption.
- Secure data storage thanks to state-of-the-art encryption.
- Only modified files or data fragments have to be transferred. Very little bandwidth is required as a result.
- Virtually any corporate IT component can be backed up.
- Different backup rules can be applied to different data based on priority.
- Rapid backup thanks to intelligent analysis and transfer of data.
- Data can be recovered at any time and from any location. In addition, you can search your backup rapidly in a targeted manner.
- German data protection laws and the highest level of hardware security.
